

Here's your Free Guide.....

This is **DAY 7** of the *AI Creator Series*

## AI Animation That Feels Human — The Style Block Method

### ★ THE STYLE EXTRACTOR PROMPT:

Analyze the attached reference images and extract UNIVERSAL STYLE BLOCK. Extract only the RENDERING DNA — what stays true no matter what is depicted: EXCLUDE completely: subject matter, location, time of day, weather, camera distance, subject scale, staging, composition, aspect ratio, foreground framing devices, specific named colors. STRESS TEST before answering: the block must hold true for an extreme close-up of a hand, a macro product shot, a tight portrait, an interior, and a wide landscape. If any line would break in one of those, rewrite it as a rendering rule instead of a composition rule. It should also define the official style name and its look that is professionally and widely used to refer that exact style. Output:

- One style block that can be used to create character sheets which includes this block at the start (in 3 panel character sheet against grey studio background, 1 front facing close up and and two full body of front and back) and then followed by that style block. So the user can paste this under the description of any character a user wants to create.
- One style block for location images. (that will mainly be style block that can be added under the description of any location image a user wants to create)
- both block should be as small as possible without compromising the style
- Both block should give the same style as input images with same feel and look

Additional things: Notify the user if input images does not have cohesive style instead of guessing one unified style for random input images.

- **Paste this prompt in claude or GPT ASTRA along with your reference images. Make sure your images are of similar style.**

- **This will give you 2 prompt blocks – One for the CHARACTER SHEET & the other for LOCATION**

### CHARACTER SHEET BLOCK

3-panel character sheet on a plain mid-grey studio backdrop: panel 1 front-facing head-and-shoulders close-up, panels 2 and 3 full-body front view and back view, same character, consistent scale.

Style: cut-paper relief illustration (papercraft collage). Every form hand-cut from matte uncoated textured cardstock with visible paper tooth and slightly fibrous cut edges, stacked in shallow physical layers a few millimetres apart. Flat solid colour fills only — no gradients, blending or airbrush; tonal change comes from swapping a different sheet, never from shading. Simplified confident graphic silhouettes, mid-century character drawing; facial features and fine detail added on top in thin, loose, slightly wobbly hand-drawn ink line. One soft directional studio light so each layer drops a short soft real shadow onto the layer beneath — depth reads as stacked paper, never as 3D rendering. Fully matte throughout: no gloss, metal, glass or specular highlight regardless of material depicted. Restrained muted palette with one or two saturated accents. Photographed as a real physical paper set.

**This already contains how the character sheet should come out , So only write a small description of your character in the start!**

### LOCATION BLOCK

Style: cut-paper relief illustration (papercraft collage). Entire scene built from hand-cut matte uncoated textured cardstock, every element a separate flat sheet stacked in shallow physical layers a few millimetres apart, edges crisp with a faint paper curl. Flat solid colour fills only — no gradients or blending; tonal change comes from swapping a different sheet, never from shading. Simplified graphic silhouettes; small details drawn on top in thin, loose, hand-drawn ink line. One soft directional studio light so each layer drops a short soft real shadow onto the layer behind — all depth reads as stacked paper, never as 3D rendering. Fully matte throughout: no gloss, metal, glass, water sheen or specular highlight regardless of material depicted. Restrained muted palette with one or two saturated accents. Photographed as a real physical paper set with gentle focus falloff into the rear layers.

**Same for location, so just write a small description of your location in the start (And say "A wide shot of..")**

- Then you should have Assets like these ready to turn into motion!

### NOTE :

For some specific rare styles this method might not work accurately so experiment with the prompt given by claude/astra  
And also experiment with the different image models cz the output difference will be huge.

## ✓ EXAMPLE 1:

## [REFERENCES]

<<<image\_1>>> — the baker girl. Blonde chin-length bob with headband, pale blue short-sleeve dress, white apron with pink cupcake motif, black pointed heels, white wired earphones running from both ears down into her apron, black wire whisk in hand. Focused, faintly impatient. She never speaks.

<<<image\_2>>> — the cat. Small round black paper cat, pink inner ears, white ring eyes, drawn ink whiskers, gold bell on a collar. Sleepy, then idly curious.

<<<image\_3>>> — the bakery kitchen. Use this location exactly as it appears: green cabinets, timber counters, terracotta tile floor, central wooden island bare except a pink bowl at island left and a blue bowl at island right, red-striped stand mixer with steel bowl on the back-left counter beside a paper canister, pink polka-dot oven mitts on the wall hook at right, paper canisters along the right counter, wide vine-framed window onto open country behind the island. EXEMPTION: the daylight through the window, the vine leaves, and the countryside beyond must move, and are not bound by the still.

## [SUMMARY]

Sunlit morning in the paper kitchen. The cat wakes and yawns on the left end of the island while the baker girl stands beside it squinting at an open recipe book.

## [STYLE]

Cut-paper animation. Flat hand-cut cardstock character standees with visible paper tooth, fibrous cut edges and hand-drawn ink linework for faces and detail, performing inside a fully built dimensional papercraft set — a paper theatre. Characters stay flat, rigid and on-model, moving in true parallax layers and casting real soft shadows onto the set; they never inflate into 3D geometry, never bend like rubber, never morph. Flat solid colour fills only, no gradients or blending; tone changes by swapping a sheet, never by shading. Fully matte throughout: no gloss, no metal sheen, no specular highlight, no glow. Filmed as a real physical paper set on 35mm, shallow depth of field with gentle focus falloff, fine film grain. Warm low morning sun raking in through the window, cool paper shadow in the corners. Motion smooth and cinematic — no stop-motion stutter, no melting paper edges.

## [PHYSICS]

Everything behaves as paper and card with real mass. Card figures move with weight and momentum, edges staying rigid; hair and apron swing as hinged flat sections, not cloth simulation. Loose paper pages lift, bend at the spine and fall flat. Air from the window moves only light things — page corners, vine leaves, the apron hem. The cat's bell swings on its collar and only rings when the cat moves.

## [DETAILED PLOT]

0-4sec: Wide establishing shot of the kitchen from the doorway, slow push in. The girl stands at the island, whisk in one hand, open recipe book propped beside the blue bowl. At the far left end of the island the cat lies curled asleep in a flat black disc. Window light rakes across the tile floor; vine leaves stir.

4-7sec: The cat uncurls — front paws stretching forward, spine arching, tail lifting — and opens its mouth in a wide slow yawn, ink whiskers spreading, bell chiming softly. It settles upright and blinks at the girl, who hasn't noticed. The camera continues in and arcs to her left as she leans down toward the book, one finger tracking a line of ingredients.

7-10sec: Dramatic three-quarter close-up on the girl. She raises one eyebrow high, squints hard at the page, mouth pressing into a line. She tilts her head, unconvinced. Hold on her face, the cat soft in the background behind her.

## [OVERALL REQUIREMENTS]

16:9. No music, no score, no BGM — SFX only: birdsong and light wind from the window, paper page shifting, faint tinny music leaking from her earphones, a soft yawn, a single bell chime. No dialogue. No speaking. No text or captions on screen. Keep all characters and the kitchen exactly consistent with the references. No photorealistic skin, no 3D CGI look, no gradients, no lens flare, no camera shake, no zoom punch-ins.

## ✓ EXAMPLE 2:

## QUICK RECAP

AI animation that feels human — the style block method

1

### Lock Your Style First

Pull 8–15 consistent references, run the style extractor prompt, then Google the style name to verify it.

2

### Build Every Asset With The Block

Paste the identical style block at the end of every character, location and prop prompt. Never edit it between assets.

3

### Let Claude Write The Video Prompt

Feed it your assets, your style block and a rough scene idea. Get back a structured, ready-to-paste Seedance prompt.

4

### Generate And Judge The Motion

Run a few takes and pick the one where the style texture survives the movement. That's the tasteful one.

## THE SMART STRATEGY:

Slop isn't caused by AI — it's caused by the absence of a point of view. The moment you extract one specific style and carry that same block through every asset and every shot, your work stops looking generated and starts looking authored. Taste isn't a filter you apply at the end. It's a decision you lock at the start.
